- a new school of the future under way

Blå Veje – A visionary school projekt for the future!

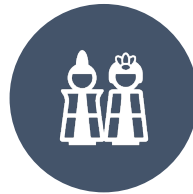

Do you share our vision that children should be educated to be World Citizens of the future?

- That they need to be supported in navigating a global complexity that requires completely new mindsets?
- That children deserve to spend the many hours at school in stimulating and sustainable environments designed for learning and well-being?
- That all people are unique and have something to offer, and that the primary task of the school is to help all children to realize their potential to the fullest extent possible?

Vores vision – Blå Veje in English mean ‘Blue Ways’

Blue Ways is an educational vision to meet the 21st century's need for a future-oriented, sustainable school education. A school education that aims to develop responsible world citizens who can act in a changing world with an open, innovative mind while developing their own unique competences on a versatile educational journey.

The Blue Ways pedagogy seeks to promote the unique potential of each individual and thus all types of talents. The starting point is that everyone is needed and that absolutely everyone has something important and valuable to offer. Therefore, the Blue Ways pedagogy sees it as its ultimate task to spot the individual child's talent and guide the child further in the direction it wishes for itself, with the talents it possesses. The pedagogy also aims to interact closely with society's need for new talents in both science and creative expression in arts and culture and the business community's need for skilled innovative workforce. It is important for Blue Roads that the child experiences themselves as part of the world in which they are a citizen, and that the school prepares students to meet the challenges of global society - including the ability to act individually and to collaborate and pledge together.

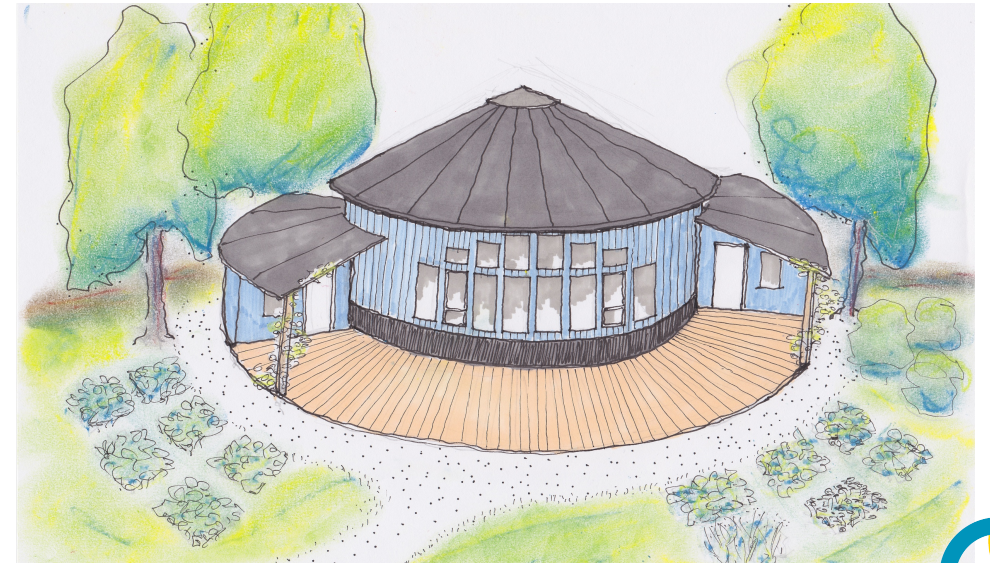

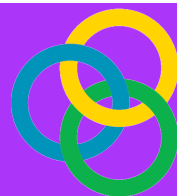

We want to create a school based on forward-looking state-of-the-art natural approaches to education and educational work that focuses on our humanity. A learning space focused on enlightenment as well as astonishment and with sustainable approaches to the physical environment, where children and young people's natural development is supported by a secure framework both physically and educationally, and where they can safely make mistakes and ‘try-out’ for themselves as part of a healthy learning process.

Template for world citizenship

- Blue Ways is an educational vision that is about putting students on an educational journey to become a World Citizen.
- We see the world citizen as a human being who sees himself as a citizen of multiple societies, both as part of a local community, part of a nation, part of the global world community and part of universal humanity to which we all belong. .
- On Blue Ways we therefore make sure to embrace the whole person. We see school as a university for life.
- The pedagogical approach is built around three pedagogical pillars as the foundation for a holistic, versatile approach to education and learning.

De 3 pædagogiske søjler

New frameworks

An educational method and didactics based on the school as a 'university of life', with some everyday settings adapted to the child's natural versatile development and education.

New Ecology

We will build with methods that give students optimal opportunities to concentrate and learn so that they can become world citizens in the best possible environment. We are also building sustainably as it is a school for the future.

New mindsets

The foundation for forming students for world citizenship is a developing learning 'mindset', which is grounded in both mind and body, and which works towards never stagnating. Blue Way's view of learning is founded on a holistic thought about the whole natural person, which is a goal in itself.

Who are we?

We are a group of teachers, educators and design and construction experts, and other passionate souls who, over the past five years, have worked on realizing an educational vision of a different school for the future. A sustainable school focusing on the whole person and the formation of children and young people for world citizenship. In August 2019, we founded the school at the Ministry of Children and Education under the name "Blå Veje Skole".

An opportunity for a good property

Good properties are hard to get in Copenhagen and in the surrounding area. However, we now have an opportunity to buy a closed institution that has been put up for sale in Dragør (small suburb just outside Copenhagen) We want to remodel and rebuild with sustainable technology and innovative learning buildings that create the optimal environments to support pedagogy and vision.

Deadline to bid on the property is 24.04.2020!

Here is a link to the property, as well as a few illustrations of Blue Ways on the site.

The school form and structure

- The school must be established as a self-governing institution with its own administration, which, through self-financing and state aid, is an independent free school that complies with the provisions of the Free Primary Schools Act.
- Free schools fall under the Ministry of Education, and are required to submit annual accounts per year. 31.12.2018.
- Grants are awarded to Free Schools, cf.
- Bek.nr. 1111 of 30.8.2018 Law on Free Schools and Private Primary Schools.
- Bek.nr. 1833 of 18.12.2015 Grants for free schools and private elementary schools.

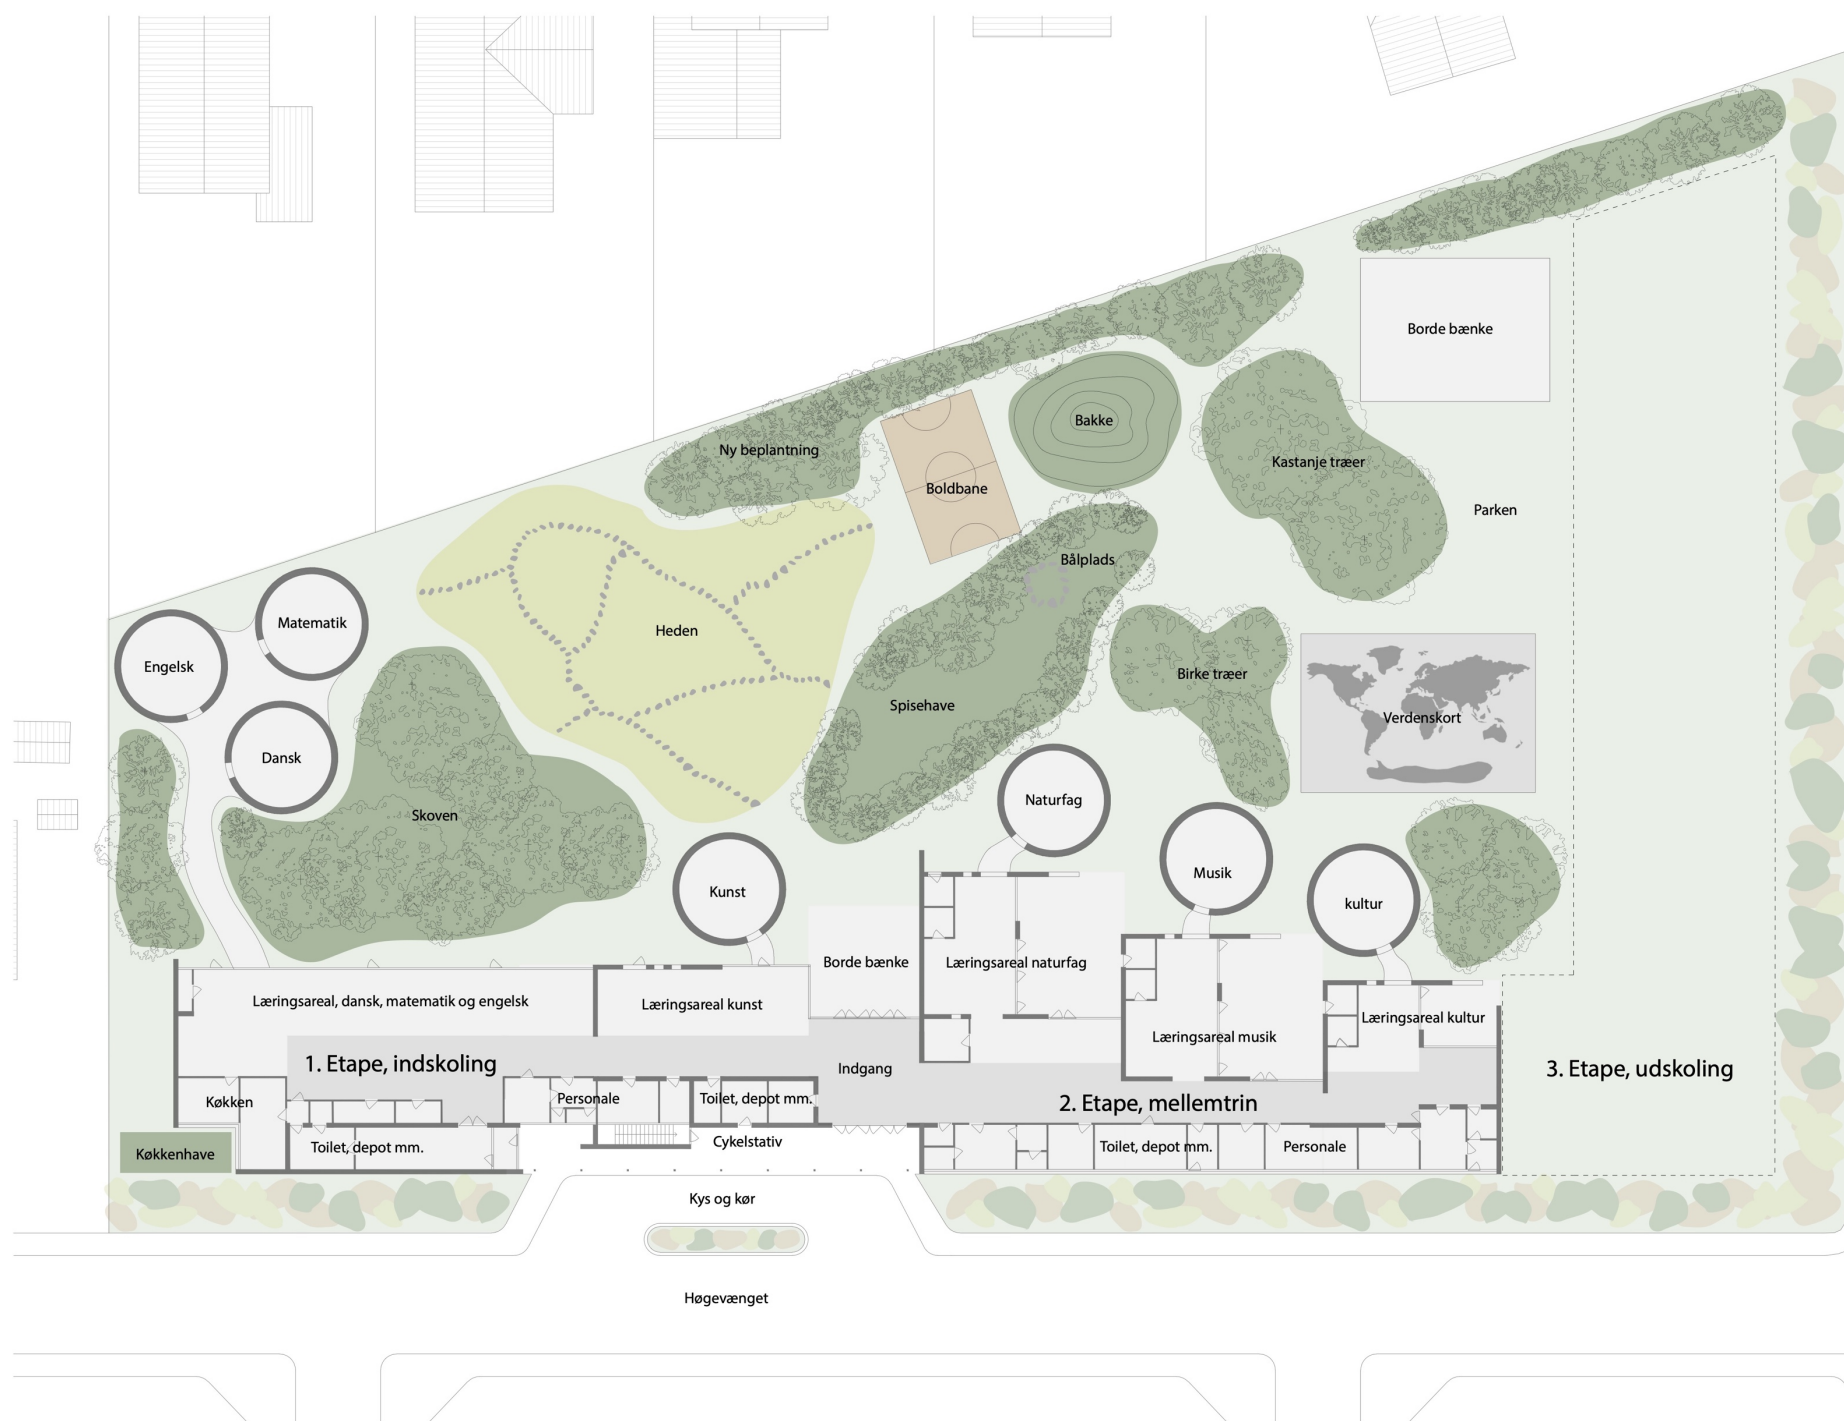

We start with the primary school grades and build upwards

The Blue Ways School will be a one class per grade with a maximum of 20 pupils per grade.

We will start with the first three grades, ie 0, 1 and 2, (in Denmark age 6-8) and slowly build a school culture as classes move up and with a new 0 class each year. After a projected start-up phase of 3-6 years, we will build further on the property to also be able to accommodate the schooling (7th, 8th, and 9th grade).

Floor plan of remodeled school and later stages

Teacher coverage

In the context of building the school, teachers and educators will be employed, and we will follow the Ministry of Education's recommendations for the number of teachers in relation to the number of students. We expect the following teacher coverage:

This ratio is on a par with similarly profitable schools.

	2020	2021	2022
Amount of student per teacher.....	13,33	13,90	14,42

Establishment budget - estimate

- Purchase of land and Buildings DKK 6,200,000
- Transaction costs DKK 80,000
- Rebuilding and Renovation of buildings DKK 3,500,000
- Outdoor areas DKK 100,000
- Furniture and furniture DKK 100,000
- Other DKK 200,000
- Financial deficit for years 1 and 2 Dkk 450,000
- The accounts and budgets are made in collaboration with BDO
- a state-approved auditor company

Operating budget for the first
3 years for Blue Ways School.

We need help with start-up capital

- We would like to buy and remodel for a total of 10 million. The banks that we negotiating with the financing want us to provide 30% equity / capital. This is because the land cannot be changed to anything other than an institution, and because that there are greater requirements for free elementary schools today than before. Blue Ways itself has DKK 150,000 and expects DKK 600,000 in parental deposit, but only when there is a guarantee that the school will start.
- We therefore seek loans (or major donations) from private as well as from companies. A low interest rate loan can be advantageous for those who have funds in bank, which has minus interest rate right now, while also helping us get started on building the school. Any loan will be signed and signed by the Board of Directors as debt and further agreements can be made with the school.
- We are in need of 1,800,000-2,000,000 DKK (240.000-280,000 EURO) as start-up capital for this specific property.

For mere information

If you are interested in supporting the realization of this amazing project, hear more about the project or want to read more about the pedagogy or project, you can visit our website www.blaaveje.dk, (albiet in danish) or write to info@blaaveje.org.

You are also welcome to call Project Manager Nis Lorenzen:
+45 25173003.

Deadline to bid on the property is 24.04.2020!
